## When Life is a Matter of One Extra Breath...

Ever engaged in a water recreation or sport activity where you were caught gasping for air, fearing for the worst?

### If the answer is yes...

NO<sub>2</sub>AH Second Breath is a compact, self contained life-saving device that is worn around the wrist and is designed to provide an immediate supply of air in an emergency situation.

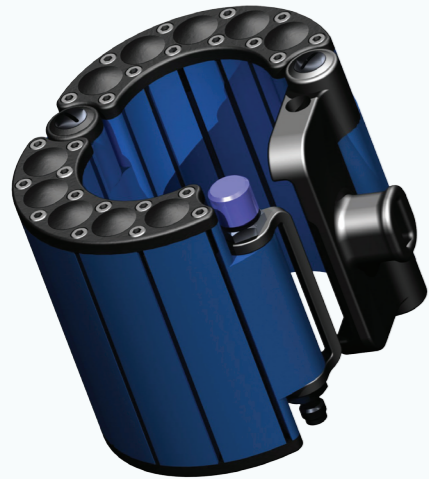

Simply raise your arm to your mouth. Air is released directly into the mouth by simply gently biting down onto the mouth piece.

This intuitive action in a potentially stressful situation is so much simpler and easier than fumbling to gain access to an emergency air supply from current safety devices that are on the market.

NO<sub>2</sub>AH Second Breath air supply is neither tank-based nor is accessed through a tube as with all other emergency oxygen supply devices currently available.

This means that its small size and unique design will not interfere with the wearers' activities.

NO<sub>2</sub>AH Second Breath is totally unique,

NO<sub>2</sub>AH Second Breath is unlike any other emergency air supply device currently available. Until now, portable emergency oxygen supply devices use cumbersome tanks and air hoses that are either hand-held or strapped onto the torso of the user, which seriously limit the activity of the wearers. So if you want to have improved Confidence and Peace of Mind, when facing possible issues of safety: NO<sub>2</sub>AH Second Breath provides it.

With NO<sub>2</sub>AH Second Breath, if you get caught in an undertow while chasing that one dream wave, get caught under water windsurfing, or get trapped under water, unable to flip your kayak back upright on that radical fast water, all you have to do is raise your wrist to your mouth and NO<sub>2</sub>AH Second Breath will be there to give you those few desperately needed breaths of air to get yourself out of trouble.

### NO<sub>2</sub>AH Second Breath Saves Lives

NO<sub>2</sub>AH Second Breath is refillable via hand pump or scuba tank.

NO<sub>2</sub>AH Second Breath provides approximately 15 breaths of air on land or 5-8 breaths in water.

NO<sub>2</sub>AH Second Breath is recognizably the quickest most convenient means to supply emergency air or other medical aerosols to the wearer. As a result we have been approached by First Responders, Military, Oil Company's and the Sport and

Leisure Industry with the aim to supply and act as distributors for this ground breaking life saving device.

NO<sub>2</sub>AH Second Breath is destined to become as important and as common place as the automobile seat belt and a must have for anybody engaging in leisure or workplace activities on or near a water environment, or air contamination condition, such as a Fire.
